Finance Manager
EDF Renouvelables

EDF Renewables: efficiency and data security challenges

Before Trustpair, EDF Renewables didn't have a dedicated tool to monitor vendor banking data:

1. Time-consuming and manual controls were executed by the Treasury team - via scans - for over 15.000 vendors. The team **wasted time and wasn't efficient enough.**

2. No data reliability or guarantee against fraud. Payment processes were **fallible and insecure.**

GOAL 1

Ensure **vendor data reliability**, in France and overseas.

GOAL 2

Reduce the workload and **increase operational efficiency.**

> Before Trustpair, we controlled banking data with scans. We had no way of validating the authenticity of vendor banking data. We could detect mistakes, but that was all. We had no guarantee against fraud.

Monika Razny
Treasury and Corporate Finance Manager
EDF Renouvelables

Trustpair's answer

EDF Renouvelables integrated Trustpair into SAP S/4HANA with Trustpair's native and certified connector for SAP. Vendors are now automatically controlled when they're added or in case of data modification, without human intervention for most of them.

0 FRAUD EVENT

⟳ Controls are **automated** in SAP. Vendor bank account validation is systematic and **fraud avoided.**

⊕ **International vendor data is secured** thanks to the most comprehensive network of bank account databases on the market.

60 WORKDAYS SAVED

✂ **Manual account validation was cut** and the Treasury team gained time.

🕐 83 % of account validation controls are executed in less than 24h, which **increases efficiency.**

⋆ Controls are **done directly in SAP** thanks to the connector. User-experience is enhanced.

> The native connector to SAP S/4 Hana has increased our operational efficiency. We manage our vendor data in SAP: it's much easier to monitor their banking data directly in the ERP rather than on a separate software.

Treasury and Corporate Finance Manager
EDF Renouvelables

Trustpair's added value according to EDF Renewables

A simple and painless project roll-out and deployment, led in 3 months and respecting a clear schedule.

Daily support during deployment with a dedicated technical consultant and Customer Success Manager.

An **attentive customer support team**, available for any request or feedback.

Intuitive and easy-to-use features for an **enhanced user experience.**

"

All the EDF Renewables team had the feeling of really being guided and supported during the roll-out. Everything went smoothly and in 3 months the solution was deployed.

Monika Razny
Treasury and Corporate Finance Manager
